It was designed from the partial cDNA clone published by Ruta et al, 1988. See also AAQ13308-Q13311. (Updated on 25-MAR-2003 to correct PA field.)

         This oligonucleotide was designed to amplify the region of homology in the kinase domains of PDGF receptor, HER2, HER3, FGF-FLG, FGF-BEK, insulin receptor and IRR. It was used with another kinase homology domain-based primer (see AAV05313) in the amplification of human LIM-kinase 1 (LIMK1) sequences. The LIMK1 gene is composed of 16 exons (see AAV05315 and AAT99599-T99629) and located 15.4 kb 3 of elastin in chromosome 7. It encodes a novel protein kinase (see AAW46576). Williams syndrome cognitive profile (WSCP) is detected by determining zygosity of the LIMK1 locus, with hemizygosity being indicative of impaired visuo-spatial constructive cognition. Chromosome 7 deletion analysis allows
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAV44043-V44045 are PCR primers used to amplify a murine basic fibroblast growth factor (bFQF) which is a member of the heparin-binding growth factor receptor family. This protein is used in a method which assays the ability of a substance to bind to a high-affinity heparin-binding growth factor (HBGF) receptor. The assay screens for potential antitumour agents that inhibit binding of HBGF to high-affinity receptors, or for potential wound healing agents that promote such binding.
                                                                                                                                                                                                                                              Diagnosing Williams syndrome cognitive profile from hemizygosity of LIMK1 - gene on chromosome 7 encoding new kinase, allowing differentiation from classic Williams syndrome and supra-vascular

The invention relates to methods for promoting corneal cell proliferation in vivo by treating the cells with hepatocyte growth factor (HGF) and optionally keratinocyte growth factor (KGF). Methods for suppressing corneal cell growth include administering Ca ions to the cells. The methods are used for the treatment of corneal disorders following accidental injury, ocular surgery or due to corneal disorders caused by abnormal healing processes of the corneal epithelium and endothelium. The methods are based on the discovery that corneal tissue can express mRNA for HGF, KGF and their respective receptors. The primers AAT63283 and AAT83286 were used to amplify a 205 fragment of the fibroblast growth factor (FGF) receptor 2 cDNA. This primer is the fibroblast growth factor (FGF) receptor 2 cDNA. This primer is the pareful of the primers primer is the methods are based on the second to bases 110-130 of the pareful of the methods of the primers and corresponds to bases 110-130 of the pareful of the primers primer and corresponds to bases 110-130 of the pareful of the primers primers and corresponds to bases 10-130 of the pareful of the primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers and corresponds to bases 10-130 of the pareful of the primers primers and primers primers primers primers primers primers proving the primers

                                                                                                                                    The specification describes the preparation of immortalized human hair papila cells (HPC). The method comprises transformation of HPC with an SV40 viral Large T-antigen gene with deleted replication initiation point. The immortalized HPC can be used in a screening method for a hair growth agent, by culture of immortalized HPC in the presence of a substance to be tested and observation of the growth of the immortalized HPC. HPC is also used in development of hair growth stimulating agents. The present sequence represents a PCR primer, which is used in the course of the invention.

The present invention describes an isolated, pure population of mammalian neuroepithelial stem cells, which are capable of self-renewal in adherent feeder-cell-independent (ARCI) culture medium and differentiation to central nervous system (CNS) neuronal or glial cells and to neuronal crest stem cells. Also described is an isolated population of mammalian CNS glial-restricted precursor (GRP) cells which can self-renew in the APCI culture medium and can differentiate to CNS glial cells but not to CNS neuronal cells. The stem cells can be used to generate a population of mammalian motor neurons by incubating the stem cells in a medium promoting cell proliferation and neuronal

Mammalian neuroepithelial stem cells and glial restricted precursor - can self renew and differentiate into central nervous system cells, used for generating various types of cells

                               claimed method for identifying the presence or absence of a deletion of the KIT gene sequence in pig genomic DNA. Other claimed primers (see AAT84420-27) are used to detect a duplication of the KIT gene. The 3 alleles for coat colour (I, inhibition of coat colour; I(p), patch; and i, development of colour) can be differentiated on the basis of duplication/deletion in the KIT gene. This allows breeding of pigs with the desired, usually white, coat colour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      medium lacking chick embryo extract. The stem cells can also produce neural crest stem cells by inducing the cells to differentiate in vitro. The inducing step comprises replating the cells on a laminin-coated substrate and preferably withdrawing a mitogen (preferably fibroblast growth factor; FGF) and chick embryo extract. Inducing can also comprise adding a dorsalizing agent to the cells, preferably a bone morphogenetic protein (BMP) such as BMP-2, -4 or -7. The stem cells can be used to produce cells of the peripheral nervous system, by inducing the stem cells to differentiate in vitro to neural crest stem cells, and inducing these cells to differentiate. AAX00029 to AAX00054 represent PCR primers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Determn. of coat colour genotype in pigs by analysis of the KIT gene - for duplication or deletions, or analysis of KIT protein, used to establish breeding programmes for pigs of selected colour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             12-DEC-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      뭐
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     SO
                                                                            A method has been developed for: (a) differentiating animals and animal CC products according to breed origin; (b) determining or testing the breed CC origin of a product; or (c) validating an animal product. The method CC comprises analysing a sample of the product for the allele(s) of at C cleast one breed-determinant (BD) gene. The present invention also CC describes: (1) methods for determining the coat colour genotype of a pig CC by determining; (i) the allele(s) of the alpha melanocyte-stimulating CC hormone receptor (alpha-MSHR) gene; (ii) the amino acid sequence of an CC alpha-MSHR protein at positions associated with coat colour, or the size CC of the protein; (iii) detecting which microsatellites (or other linked CC marker alleles), linked to the alpha-MSHR gene, or particular alleles of it, are present; and (iv) analysing nucleic acid to determine if the KIT CC gene carries a polymorphism associated with the Belt genotype. The CC main method of the invention is applied to samples from fish, birds and CC marmals, especially pigs. Particular applications are confirming stated CC origin of meats; in quality control; for maintaining stock purity, and CC in breeding programmes (to confirm particular crosses). The method CC invention of meats; The process can be made quantitative. The present sequence represents a KIT gene PCR primer from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
